

FY 2000 Year-In-Review Article - Project No. 96.015

The CADD/GIS Technology Center completed the second release of the Facility Management Standards (FMS) for Facilities, Infrastructure, and Environment in December 1999 (i.e., SDS/FMS Release 1.90). The FMS is being developed and distributed in such a manner to integrate seamlessly with the Spatial Data Standards (SDS) for Facilities, Infrastructure, and Environment. An interim update of the Facility Management Standards was provided with the SDS/FMS Release 1.95, completed in April 2000. Five hundred Release 1.95 CD-ROMs were published, the majority of which were distributed at the CADD/GIS Symposium and Exposition 2000, St. Louis, MO in May 2000. Among the most significant Releases 1.90 and 1.95 accomplishments included: (1) an expansion of environmental restoration data elements through further integration of the Air Force Environmental Restoration Program Information Management System (ERPIMS) and (2) Additional improvements to the SDS/FMS Generator to accommodate Facility Management (FM) Entity Classes and Tables.

Additional accomplishments included (1) The preparation of a "Facility Management Standards Strategic Development Plan" (FMS Strategic Plan); (2) The advertisement of a "Request for Information" and receipt of proposals from commercial vendors and contractors concerning the FMS Strategic Plan; and (3) Research and compilation of Department of Defense Asset Management/FM Legal Reporting data requirements which will be incorporated into a future release of the FMS.

Also, FY2000 saw the completion of the alpha version of Release 2.00. Among the most significant Release 2.00 accomplishments included: (1) Revision of the Communications Entity Set data model as recommended by field communications experts; (2) Incorporation of airfield related data elements from the Defense Information Systems Agency (DISA) Defense Data

Repository System (DDRS) and National Imagery and Mapping Agency (NIMA); (3) Incorporation of the Environmental Protection Agency (EPA) Drinking Water Quality data requirements; and (4) Incorporation of Building Space Management data standards.

Also, beginning with the Release 2.00, the acronym will be changed to FMSFIE, as directed by The CADD/GIS Technology Center's Standards Committee (SC) and Corporate Staff (CS).
