## **CHANGE IN MICROSOFT ACCESS VERSION:**

Prior releases of the SDS/FMS (and TSSDS/TSFMS) have used Microsoft Access 2.0 (16 bit application). This was done to permit the use of a single dataset for both of the SDS/FMS Application Toolbox sets. However Microsoft no longer supports the 16 bit version of Access. There the SDS/FMS database have been migrated to Microsoft Access 97 (32 bit application). Care should be taken in further upgrading of these databases to Microsoft Access 2000 since comprehensive testing of this configuration has NOT been completed.

## **CONCEPT CHANGES:**

Release 1.950 of the SDS/FMS includes two new concept changes:

1. Feature Name: Unlike the Feature "ALIAS" the Feature Namis is unique to an individual feature, for example a discriminated entity type with the SDS/FMS.
2. Expanded inclusion of other data requirements, including comparative analysis with other Air Force, Navy, and Corps of Engineers Standards.
